List of Program Electives for Geotechnical Engineering

S. No.	Course Name	Course Code
1	Soil-Structure Interaction	MTGT-16601
2	Rock Mechanics	MTGT-16602
3	Geosynthetic Engineering	MTGT-16603
4	Structural Design of Foundations	MTGT-16604
5	Clay Mineralogy	MTGT-16605
6	Retaining Structures	MTGT-16606
7	Slope Stability Analysis	MTGT-16607
8	Case Histories in Geotechnical Engineering	MTGT-16608
9	Earth Anchors	MTGT-16609
10	Design of Highway and Airport Pavements	MTGT-16610
11	Traffic Simulation and Management	MTGT-16611
12	Buried Structures	MTGT-16612
13	Environmental Impact assessment & Management	MTGT-16613
14	Advanced Soil Mechanics	MTGT-16614
15	Disaster Reduction and Management	MTGT-16615
16	Environmental Geotechnology	MTGT-16616
17	Ground Improvement	MTGT-16617
18	Earthen Embankment	MTGT-16618
19	Geomechanics	MTGT-16619
20	Highway Materials & Construction	MTGT-16620
21	Numerical Methods in Engineering	MTGT-16621

***Department can float any above subject as Open elective as per the requirement of timetable.**

M. Tech. -Soil Mechanics & Foundation Engineering (Part Time)

Semester	Type	Credits	Subjects [Batch 2016]	Subjects [Batch 2015]
1st	Core	4	Applied Soil Mechanics [MTGT-16503]	Soil Dynamics [MTGT-501]
	Core	4	Site Investigations [MTGT-16501]	Applied Soil Mechanics [MTGT-503]
	Program elective	3	Highway Material and Construction [MTGT-16620]	Structural Design of Foundations [MTGT-604]
2nd	Core	4	Soil Dynamics [MTGT-16506]	Site Investigations [MTGT-506]
	Program elective	3	Ground Improvement [MTGT-16617]	Ground Improvement [MTGT-617]
	Lab	2	Lab-1 [MTGT-16507]	Lab-1 [MTGT-507]
3rd	Core	4	Advanced Foundation Engineering [MTGT-16502]	Advanced Foundation Engineering [MTGT-502]
	Core	4	Analysis of Settlement of Soil & Foundation [MTGT-16505]	Analysis of Settlement of Soil & Foundation [MTGT-505]
	Open elective	3	To be selected from the list of subjects floated by other departments. [MTXX-YYY]	Renewable Energy Resources (MTEE-615); Offered by Electrical Engg. Department
4th	Core	4	Research Methodology [MTGT-16504]	Research Methodology [MTGT-504]
	Program elective	3	Design of Highways and Airport pavements [MTGT-16610]	Design of Highways and Airport pavements [MTGT-610]
	Lab	2	Lab-2 [MTGT-16508]	Lab-2 [MTGT-508]
5th	Program elective	3	Structural Design of Foundations [MTGT-16604]	Highway Material and Construction [MTGT-620]
	Open elective	3	To be selected from the list of subjects floated by other departments. [MTXY-ZZZ]	To be selected from the list of subjects floated by other departments. [MTXY-ZZZ]
	Pre-thesis seminar	1	MTGT-16509	MTGT-509
	Pre-thesis project	3	MTGT-16510	MTGT-510
6th	Thesis	15	MTGT-16511	MTGT-511

MTGT-16501 Site Investigations

Course Credits --4

Internal Marks: 50

L T P

External Marks: 100

4 0 0

Total Marks: 150

1. Soil formation -Processes – Characteristics of major soil deposits of India. Necessity and Importance of soil exploration Method of sub surface exploration Test pits , Trenches, Caissons, Tunnels and drifts, Wash boring , Percussion drilling , Rotary drilling, Factors affecting the selection of a suitable method of boring. Extent of boring, Factors controlling spacing and depth of bore holes, Spacing and depth for various Civil engineering structures.
2. Indirect method of exploration, Seismic method, Electrical resistivity, Resistivity sounding and profiling, Qualitative and quantitative interpretation of test results, Comparison of resistivity and seismic surveys, Shortcomings.
3. Stabilization of bore holes, Different method of stabilisation of the bore holes, their relative merits and demerits.
4. Ground water Observation: Different method of ground water observation: Time lag in observation, Sampling of ground water.
5. Sampling: Source of disturbance and their influence, Type of sampler, Principle of design of sampler, Representative and undisturbed sampling in various types of soils, Surface sampling, Amount of sampling, Boring and sampling record, Preservation and shipment of sample preparation of bore log.
6. In situ Permeability. Pumping in test in a cased hole with open end, Falling head packer test constant head packer test, Pump in out tests in a single test wall and open pit or unlined hole. Piezometer methods .
7. Water content at site: Speedy moisture tester, Their relative merits and demerits.
8. Fields Tests: Standard penetration test, Dynamic cone penetraion tests with and without bentonite mud slurry. Static cone penetration test, Surface sampling. Cyclic plate load test, Large shear box test, Vane shear test, Pile load, , Block resonance test, wave propagation test. Small size penetrometers, Pressuremeter test and Diltometer test. Various corrections in the test results and interpretation of test results for design of foundations. Correlation among various test results. Precautions to be exercised during the execution of these tests. Preparation of bore hole log.
9. Investigation below sea/river bed – methods and equipments – interpretation of offshore exploration, Instrumentation in soil engineering - strain gauges - resistance and inductance type - load cells, earth pressure cells - settlement and heave gauges - piezometers and slope indicators -inclinometer, Field visit, data and report preparation.

MTGT-16502 Advance Foundation Engineering

Course Credits --4

Internal Marks: 50

L T P

External Marks: 100

4 0 0

Total Marks: 150

Shallow Foundation: Terzaghi's bearing capacity equation, General bearing capacity equation, Balla's & Meyerhof's theory, Effect of water table, special footing problems, I.S. Code, Footing pressure for settlement on sand, Soil pressure at a depth, Boussinesq's & westergaard methods, Computation of settlements (Immediate & Consolidation) Permissible settlements, Proportioning of footing, Inclined & Eccentric loads.

Pile Foundation: Timber, concrete, Steel piles, estimating pile capacity by dynamic formula, By wave equation & By static methods, Point Bearing piles, Pile loads tests, Negative skin friction, Modulns of subgrade reaction for laterally loaded piles, Lateral resistance.

Single Pile v/s Pile Groups, Pile group consideration, Efficiency, Stresses on underlying strata, Settlement of pile group, Pile caps, Batter piles, Approximate and exact analysis of pile groups, I.S code.

Well foundation: Types (open end & closed or box, pneumatic, drilled) shapes, Bearing capacity and settlements, Determination of grip length by dimensional analysis, Design of well foundation construction, Tilts & shifts.

Sheet Pile Structure: Types, Cantilever, Anchored sheet piling , Design by Fixed earth Method and modifications by Anderson & Techabotarioff, Anchor Braced sheeting cofferdam , Single well cofferdams, Cellular cofferdam, Stability of cellular cofferdam, Instability due to Heave of bottom.

MTGT-16503: Applied Soil Mechanics

Course Credits --4

Internal Marks: 50

L T P

External Marks: 100

4 0 0

Total Marks: 150

1. Introduction to stability of slopes, Stability number, Friction circle, Bishop's method of slices- simple and rigorous; Wedge method, Factor of safety w.r.t height and strength.
2. Earth work construction, Embankments, Earth dams, Field compaction, Seepage and piping in embankments and dams construction problems.
3. Stabilization of soils: Mechanical, Electrical and Chemical methods of stabilization, Problems of excavation, Dewatering, Stability of base and embankment.
4. Arching in Soil & underground culvert and conduits.
5. Swell and shrinkage, Soils characteristics, swelling pressure of soils, Mechanics of Swelling, Crack.
6. Design of open cuts.

MTGT –16504 Research Methodology

Course Credits --4

Internal Marks: 50

L T P

External Marks: 100

4 0 0

Total Marks: 150

OVERVIEW OF RESEARCH

Nature and Objectives of research; historical, descriptive and experimental, Study and formulation of research problem,. Scope of research and formulation of hypotheses; Feasibility, preparation and presentation of research proposal

METHODS OF DATA COLLECTION

Primary data and Secondary Data, methods of primary data collection, classification of secondary data,

SAMPLING METHODS

Probability sampling: simple random sampling, systematic sampling, stratified sampling, cluster sampling and multistage sampling. Non-probability sampling: convenience sampling, judgment sampling, quota sampling. Sampling distributions

PROCESSING AND ANALYSIS OF DATA

Statistical measures and their significance: Central tendencies, variation, skewness, Kurtosis, time series analysis, correlation and regression, Testing of Hypotheses :Parametric (t, z and F) Chi Square, ANOVA. Measures of central tendency and dispersion: mean, median, mode, range, mean deviation and standard deviation. Regression and correlation analysis.

DESIGN OF EXPERIMENTS:

Basic principles, study of completely randomized and randomized block designs. Edition and tabulation of results, presentation of results using figures, tables and text, quoting of references and preparing bibliography.

Note: Application and use of various software for case studies should essential be covered in the lectures.

MTGT-16505: Analysis of Settlement of Soils & Foundations

Course Credits --4

Internal Marks: 50

L T P

External Marks: 100

4 0 0

Total Marks: 150

Stress Strain Relation; Evaluation of parameters, types of settlements- elastic and inelastic, Method for estimation; Consolidation theories- one and three dimensional.

Settlement of footings- isolated footings, strip footing, Rafts, Piles and piles groups, Analysis of foundation Soil system.

References

MTGT-16506 Soil Dynamics

Internal Marks: 50
External Marks: 100
Total Marks: 150

Course Credits --4

L	T	P
4	0	0

Course Content

1. Introduction: Nature of dynamic loads, Stress conditions on soil, Elements under E.Q. loading (basic concepts only), Fundamentals of theory of vibrations-simple harmonic motion, Response of SDOF system-Vibration analysis procedure- Free and forced vibration with and without damping. Adverse effects of Seismic hazard and Site improvement methods for mitigation of earthquake hazards.
2. Dynamic Bearing Capacity: General, Failure Zones & Ultimate Bearing capacity criteria for satisfactory action of footing. Introduction to bearing capacity and settlement analysis under earthquake loading- Seismic design considerations, Codal provisions,
3. Dynamic response of Retaining wall: Seismic design consideration of Retaining Walls during Earth Quakes, Modification of Coulomb's Theory, Indian standard code of Practice.
4. Liquefaction of Soils: Soil liquefaction - Criterion and Factor Affecting Liquefaction, Susceptibility, initiation and effects of soil liquefaction, Laboratory and Field methods for estimation of liquefaction potential- CSR and CRR. Liquefaction behaviors of dense sand.
5. M/C Foundations: Introduction, Design criteria for satisfactory M/C foundation as per IS codes, Methods of analysis- Linear elastic weightless spring and elastic half space theory approach. Design of Block Foundation for reciprocating engine and low speed machines. Vibration Isolation techniques & Screening of Waves.

MTGT-16507: Laboratory-1

Course Credits --2

Internal Marks: 100

L T P

External Marks: 50

0 0 2

Total Marks: 150

- 1) Algorithm/flow chart for various geotechnical engineering problems using spread sheet, any computer language.
- 2) Stability analysis using various softwares such as GEO5, PLAXIS etc
- 3) Bearing Capacity of shallow and deep foundations using software such as GEO5, PLAXIS etc.
- 4) Settlement analysis of shallow and deep foundations using software such as GEO5, PLAXIS etc.
- 5) Analysis of soil-structure interaction problems such as piled-raft, laterally loaded piles, sheet piles etc.
- 6) Analysis of ground improvement problems such as soil nailing, use of geogrids/geosynthesis etc

MTGT-16508 Laboratory-2

Course Credits --2

Internal Marks: 50

L T P

External Marks: 50

0 0 2

Total Marks: 100

1. Relative Density of sand Test
2. Proctor Compaction Test
3. CBR Test
4. Permeability of Clay/ Sand Soils.
5. Free Swell, Swell Potential, Swell Pressure Test
6. Standard Penetration Test
7. Dynamic Cone Penetrometer Test
8. Analytical study of cuts and slopes

MTGT-16509: Pre-Thesis Seminar

Course Credits --1

Internal Marks: 100

External Marks: --

Total Marks: 100

L T P

0 0 2

This is an unstructured open-ended course where under the overall supervision of a faculty member of his discipline, each student must submit report as a culmination of his endeavor and investigation. The course will aim to evaluate student's actual ability to use the fundamentals of knowledge and to meet new unknown situations as demonstrated by the student's interaction with the teachers.

**The topic of seminar must be related to the thesis work of the student.*

MTGT-16510: Pre-Thesis Project

Course Credits --3

Internal Marks: 50

External Marks: 50

Total Marks: 100

L T P

0 0 3

This is an unstructured course where under the overall supervision of a faculty member of his discipline, each student must submit report as a culmination of his endeavor and investigation related to the topic of his/her discipline. The course will aim to evaluate student's actual ability to use the fundamentals of knowledge and to meet new unknown situations as demonstrated by the student's interaction with the teachers.

**The topic of Project must be related to the thesis work of the student.*

MTGT-16602 ROCK MECHANICS

Internal Marks: 50
External Marks: 100
Total Marks: 150

Course Credits --3

L T P
3 0 0

1. Introduction: Introduction on the rock mechanics its relation with engineering Geology and soil Mechanics-Importance and application of the rock mechanics to Civil Engineering.
2. Classification: Review of litho-logical classification of rocks, Engineering classification of intact and fissured rock- Deere & Miller and Deere classification - RQD classification on wave velocity relation classification on fissures joints and faults.
3. Engineering Properties of Rock Masses Lab Tests: Void- index test, Compression & tensile tests, Permeability, Strength characteristics, Strength of intact and fissured rocks, Effect of test conditions.
4. Stability in Rock Slopes: Modes of failures in rock masses simplified Bishop's method, Janbu's method, Hock's method, Wedge's method.
5. In Situ Testing Of Rocks: Field direct shear test, Triaxial test, Use of flat jacks, Cable jacking, Chamber test & Plate load test.
6. Stabilisation of Rocks: Rock Bolting, Principle of rock Bolting, Rock grouting, Grouting materials, Grouting operations & method of grouting.

MTGT- 16603 Geosynthetics Engineering

Course Credits -- 3

Internal Marks: 50

L T P

External Marks: 100

3 0 0

Total Marks: 150

An Overview of Geosynthetics: Classification of Geosynthetics, Functions and applications, Properties of geotextiles, Geogrids and Geomembranes.

Soil Reinforcement: Mechanism, improvement of bearing capacity, Embankments on soft ground, Reinforced Embankments and Reinforced soil walls –Internal and External Stability

Applications of Geosynthetics: Applications: Retaining walls, Embankments, Shallow foundations, Roads, Unpaved roads, Paved roads, Railway tracks, Filters and drains, Slopes, Erosion control, Stabilization, Containment facilities, Landfills, Ponds, reservoirs, canals, Earth dams, Tunnels, Installation survivability requirements.

Designing with Geosynthetics: Designing methodologies, Properties, test methods and construction with geotextiles, Geogrids and Geomembranes for Retaining/Earth walls, Embankments, Shallow foundations, Roads, Unpaved roads, Paved roads, Slopes, Erosion control, Mechanism of filtration and drainage functions & their applications.

Quality Field Performance Monitoring: Concepts of quality and its evaluation, Field performance monitoring, Case Study.

MTGT-16604: Structural Design of Foundations

Course Credits --3

Internal Marks: 50

L T P

External Marks: 100

3 0 0

Total Marks: 150

Introduction to design of foundation

Review of design of shallow footing e.g. isolated footing, combined footings, Design of Piles, Pile caps and pile foundations buildings, Design of retaining structures

Earth Retaining Structures

Design of retaining walls for dry and saturated back fills with surcharge loads. Retaining walls resting on piles, Design of bridge abutments, Design of sheet piles used for coffer dams , Design of sheeting bracing in excavation trenches ,

Special Structures

Design of foundation for transmission tower, Design of basement walls, Design of wells foundation and caissons, Design of bridge piers resting on piles and raft

MTGT –16616 Environmental Geotechnology

	Course Credits --3		
Internal Marks: 50	L	T	P
External Marks: 100	3	0	0
Total Marks: 150			

Introduction and soil mineralogy: Scope of environmental geotechnology and its applications, Soil Formation, Composition and Structure: Introduction, Soil formation, Solids composition and characterization, Mineral composition, Different scales of soil structure, Structural variations due to consolidation and compaction, Role of Composition and soil structure in the engineering behavior of soils.

Contamination in soils: Subsurface contamination, Mass transport mechanisms, Mass transfer mechanisms, Governing equation for mass transport, Soil as a geotechnical trap, effects of subsurface contamination its detection and monitoring.

Mechanisms of soil-water interaction: Diffuse double layer and simple DDL models; Force of attraction and repulsion; Soil-water-contaminant interaction; Effect of contaminants on engineering properties of soil.

Site investigation: Introduction, Site investigation approach, phase investigations, Geophysical techniques, Hydro-geological investigations, Hydro-geochemical investigations, Geochemical data collection and analysis.

Concepts of waste containment facilities: Desirable properties of soil; contaminant transport and retention; containment of solid waste in landfills, environmental impact of slurry waste and containment of slurry wastes, contaminated site remediation.

Case histories: Case histories on geo-environmental problems pertaining to use of readily available local soils, bio-remediation of spills etc.

MTGT –16617 Ground Improvement

Internal Marks: 50	Course Credits --3		
	L	T	P
External Marks: 100	3	0	0
Total Marks: 150			

1. Introduction , Economic considerations, Consolidation by preloading and sand drains , Strengthening by granular columns and lime columns, Compaction by vibro - flotation, Blasting , Dynamic consolidation, Grouting techniques and principles grounds anchors , Reinforced earth construction Geo- textiles Problems.

2. Stabilization: Mechanical, Lime, Cement, Resins & Other Chemicals, Drainage methods

MTGT-16619 Geomechanics

Course Credits --3

Internal Marks: 50

L T P

External Marks: 100

3 0 0

Total Marks: 150

1. Superficial deposits. weathering and erosion processes, Mechanism involved , Detailed description of the resulting geomorphologic feat covering weather effects river actions ,Sea action , Wind action and ice action, Their origin, Mechanism involved and engineering significance.
2. Detailed geologic and physiographic account of extra peninsular India and Indo gangetic Plains.
3. Study of important Rock: forming minerals, Quartz group, Mica, Feldspar group, Pyroxene group, Amphibole group and miscellaneous mine of common occurrence. Structures and texture of the main rock group geological and engineering characteristics of the important rock by: Microscopic study of important rock and minerals including preparation of thin sections.
4. Geotectonics: North movement, Diastrophism, Oscstasy and central drafts, formation of major structural feature in rock folds. Faults, Joints and unconformities, their effects on cut crops mechanism involved, Their engineering significance.
5. Rock as a constructional materials: sand and gravel characteristics of aggregates, Stability of slopes and cutting, Landslides and Landoidence. Geological exploration of engineering sites. Geological investigation in the case of Dams and Reservoirs Canals. Building foundation and highways.
6. Earthquakes: Mechanism involved; Geological consideration for construction; Reservoir related earthquakes.
7. Groundwater: Ground water investigation in Civil engineering, Ground water provinces in India.
8. Geological Mapping: Interpretation of geological mapping sections.

MTGT- 16620 Highway Materials and Construction

Course Credits --3

Internal Marks: 50

L T P

External Marks: 100

3 0 0

Total Marks: 150

Subgrade Soil:- significance, characteristics of soil, desirable properties, Index Properties, Soil classification based on grain size, IS soil classification, GI of soil, Subgrade strength, Evaluation of soil strength- Direct Shear Test, Triaxial Comp. test, UCS test, plate bearing test, Modulus of subgrade reaction, CBR Test.

Stone Aggregates:- Introduction, desirable properties, crushing test, impact test, soundness test, shape test, specific gravity & water absorption, bitumen adhesion test.

Bituminous Materials:- Introduction, types of bitumen materials, desirable properties, penetration test, ductility test, viscosity test, float test, specific gravity test, softening point test, flash & fire point test, solubility test, spot test, loss on heating test, water content test, Cutback bitumen, bitumen emulsion, tar.

Bituminous Paving Mixes:- Requirements of bituminous mixes, design of bituminous mix, Marshall Method of bituminous mix design, modified Hubbard field method of bituminous mix design, Hveem method of bituminous mix design.

Bituminous Pavement Construction:- Introduction, types of pavement construction, excavation equipments, embankment construction, preparation of subgrade, compaction equipments, field control for compaction, construction of earth roads, construction of gravel roads, construction of WBM roads, construction of bituminous pavements, Bituminous construction procedures.

Cement Concrete Pavement Construction:- Introduction, Mix design, concrete strength, size of aggregates & gradation, workability, construction of cement concrete pavement slab, construction of joints, joints filler & sealer, pre-stressed concrete pavements.

MTGT-16621 Numerical Methods in Engineering

Course Credits --3

Internal Marks: 50

L T P

External Marks: 100

3 0 0

Total Marks: 150

1. Equation: Roots of algebraic transcendental equation, Solution of linear simultaneous Equations by different methods using Elimination, Iteration, Inversion, Gauss-Jordan and Gauss Siedel iteration method – Factorisation method – Ill conditioned matrix. Numerical integration: Newton Cotes closed quadrature – Trapezoidal rule – Simpson's $1/3^{\text{rd}}$ rule – $3/8^{\text{th}}$ rule method. Homogeneous and Eigen Value problem, Non-linear equations, Interpolation.
2. Finite Difference Technique: Partial differential equation: Laplace, Poisson and wave equation – Explicit and implicit methods. Initial and Boundary value problems of ordinary and partial differential equations, Solution of Various types of plates and other civil engineering related problems
3. Statistical Methods: Method of correlation and Regression analysis for fitting a polynomial equation by least square
4. Initial Value problem: Galerkin's method of least square, Initial Value problem by collocation points, Runge kutta Method
